

Download and Run Instructions for PriceTracker

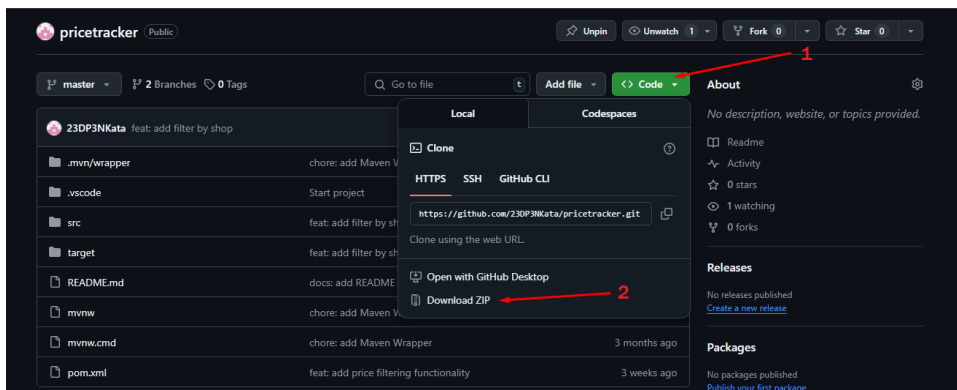

Requirements

- **Java 21** or later.
 - **Maven** for building the project.
-

Steps to Download and Run the Application

1. Download the Project:

- Visit the [GitHub repository](#) and download the project as a ZIP file,

or clone it using the following command:

```
git clone https://github.com/23DP3NKata/pricetracker
```

2. Install Java and Maven:

- Ensure that **Java 21** or a later version is installed on your system.
- Install **Maven** if it is not already installed.

3. Build the Project:

- Navigate to the project folder and run the following command:

```
./mvnw.cmd clean install
```

4. Run the Application:

- Start the application using the following command:

```
./mvnw.cmd javafx:run
```

Notes

- Ensure that your system's environment variables are correctly configured for Java and Maven.
